The Structure and Distribution of Far-right Orientation
among Young Korean Men:
A Comparison across Sex-Age Population Groups

ChangHwan Kim & Seongsoo Choi

<Appendix Table 1> Descriptive statistics for the six indicators, by group

	Youth	Men Middle -aged	Older	Youth	Women Middle -aged	Older
Justification of force / rule-breaking						
Justifies force in a liberal-democracy crisis	0.218	0.148	0.199	0.111	0.123	0.195
Force acceptable to block legislation	0.162	0.111	0.130	0.062	0.093	0.158
Justifies breaking laws/rules or force for anti-feminism	0.257	0.119	0.119	0.058	0.085	0.066
Justifies breaking laws/rules or force to reduce inequality	0.182	0.110	0.076	0.070	0.100	0.078
Composite index (0-4)	0.82	0.49	0.52	0.30	0.40	0.50
Anti-democratic / illiberal						
Accepts a strong leader breaking the rules	0.209	0.160	0.206	0.136	0.170	0.157
Distrusts election results: traitors voted	0.385	0.341	0.553	0.235	0.381	0.494
Allows defying controversial court rulings	0.199	0.234	0.360	0.157	0.193	0.349
Reinterprets the constitution aggressively to block legislation	0.321	0.349	0.453	0.280	0.372	0.471
Introduces electoral rules favoring one's own party	0.140	0.119	0.107	0.076	0.115	0.154
Composite index (0-5)	1.25	1.20	1.68	0.88	1.23	1.62
Anti-feminism						
Society functions better when men succeed	0.362	0.308	0.340	0.126	0.180	0.263
Feminism has created a system that favors women	0.666	0.521	0.402	0.169	0.230	0.307
Elites are waging a war on men	0.451	0.316	0.260	0.160	0.231	0.240
Dating and relationships are getting harder for men	0.672	0.610	0.551	0.300	0.400	0.546
A movement defending masculinity and men's rights is needed	0.480	0.320	0.253	0.079	0.137	0.178
Opposes gender quotas for senior public office	0.724	0.565	0.434	0.214	0.299	0.346
Composite index (0-6)	3.36	2.64	2.24	1.05	1.48	1.88
Opposition to minority-inclusion policy						
Opposes enacting an anti-discrimination law	0.536	0.296	0.240	0.218	0.223	0.302
Opposes mandatory disability-employment quotas	0.389	0.284	0.193	0.159	0.150	0.195
Composite index (0-2)	0.925	0.579	0.433	0.377	0.373	0.497
Economic-policy conservatism						
Welfare responsibility: prefers individual	0.524	0.305	0.443	0.310	0.295	0.378

responsibility						
Opposes tax increases for welfare	0.564	0.449	0.467	0.455	0.552	0.625
Composite index (0-2)	1.09	0.75	0.91	0.76	0.85	1.00
Foreign-policy conservatism						
Prefers a hardline policy toward North Korea	0.664	0.431	0.554	0.292	0.372	0.452
Strengthen the ROK-US alliance even at economic cost	0.565	0.369	0.512	0.288	0.285	0.335
Composite index (0-2)	1.23	0.80	1.07	0.58	0.66	0.79

Source: SisaIN-Hankook Research survey.

Note: Binary items are agreement rates (%); composite indices are means. Weighted.

<Appendix Table 2> Correlation matrix of the six political-orientation indicators

	(1)	(2)	(3)	(4)	(5)	(6)
(1) Justification of force / rule-breaking	1.000					
(2) Disrespect for democracy	0.554***	1.000				
(3) Opposition to minority-inclusion policy	0.128***	0.060**	1.000			
(4) Anti-feminism	0.353***	0.306***	0.339***	1.000		
(5) Economic-policy conservatism	0.077***	0.079***	0.319***	0.213***	1.000	
(6) Foreign-policy conservatism	0.222***	0.213***	0.325***	0.360***	0.361***	1.000

Source: SisaIN-Hankook Research survey.

Note: * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

<Appendix Table 3> Exploratory factor analysis of the political-orientation variables (varimax rotation)

Variable	Factor 1 (conservative exclusionism)	Factor 2 (violent authoritarianism)	Uniqueness
Factor 1 – dominant variables			
Economic-policy conservatism	0.742	-0.051	0.447
Opposition to minority-inclusion policy	0.735	0.054	0.457
Foreign-policy conservatism	0.695	0.238	0.461
Factor 2 – dominant variables			
Disrespect for democracy	0.015	0.859	0.263
Justification of force / rule-breaking	0.095	0.848	0.272
Anti-feminism	0.511	0.504	0.484
Eigenvalue (variance)	1.845	1.772	
Proportion of variance explained	0.308	0.296	
Cumulative variance explained	0.308	0.603	

Source: SisaIN-Hankook Research survey.

Note: Principal-component factoring (PCF), varimax rotation.

<Appendix Table 4> Distribution of far-right orientation by sex-age group: self-reported far-right share and far-right share predicted from the political-orientation indicators – analysis excluding the anti-feminism factor

		(A)	(B)	(C)	(D)
	Self-reported Far-right Share	Far-right probability estimated from two factors extracted with anti-feminism included in the factor analysis. Results from <Table 4>.	Far-right probability estimated from two factors extracted with anti-feminism excluded from the factor analysis.	Far-right probability estimated from the six <Table 1> indicators (anti-feminism included), without factor analysis.	Far-right probability estimated without factor analysis, excluding the anti-feminism indicator, from the five <Table 1> indicators.
Total	0.094	0.094	0.094	0.094	0.094
Men	0.082	0.110	0.104	0.104	0.107
18-34	0.100	0.137	0.130	0.132	0.136
35-64	0.066	0.099	0.091	0.090	0.093
65+	0.106	0.112	0.114	0.112	0.112
Women	0.105	0.078	0.083	0.083	0.081
18-34	0.069	0.058	0.066	0.069	0.065
35-64	0.105	0.076	0.082	0.082	0.080
65+	0.137	0.098	0.103	0.100	0.099

Source: SisaIN-Hankook Research survey.

Note: The self-reported far-right share is the proportion who ‘strongly agree’ or ‘somewhat agree’ with the statement ‘I am far-right.’ (A)-(D) are predicted probabilities of self-identifying as far-right from LPMs in which the ‘I am far-right’ statement is the dependent variable; the independent variables are either the two exploratory-factor-analysis factors (conservative exclusionism and violent authoritarianism) or the Z-scores of the <Table 1> indicators, with education, SES, and region additionally controlled.

<Appendix Table 5> LPM regressions of self-reported far-right identity on the six <Table 1> indicators

	Coefficient	R ²	N
Use-of-force composite index	0.093*** (0.010)	0.112	2,000
Disrespect-for-democracy composite index	0.077*** (0.009)	0.080	2,000
Anti-feminism composite index	0.048*** (0.004)	0.036	2,000
Opposition-to-minority-inclusion composite index	0.034*** (0.008)	0.025	2,000
Conservative economic-policy preference composite index	0.016* (0.007)	0.015	2,000
Conservative foreign-policy preference composite index	0.054*** (0.007)	0.044	2,000

Source: SisaIN-Hankook Research survey.

Note: Self-reported far-right refers to respondents who ‘strongly agree’ or ‘somewhat agree’ with the statement ‘I am far-right.’ All six indicator variables are Z-scores. Each model controls for only its own indicator and no other. Additional controls are sex, age, SES, and region.

* p<0.05, ** p<0.01, *** p<0.001.

<Appendix Table 6> LPM regressions on conservative political orientation: the dependent variable is a binary indicator of conservative orientation

Source: SisaIN-Hankook Research survey. Note: Respondents are limited to those who support conservative policies. All dependent variables are indices converted to Z-scores. The two factors are the factor scores from the exploratory factor analysis. See <Appendix Table 3> for the exploratory factor analysis. * p<0.05, ** p<0.01, *** p<0.001.

<Appendix Figure 1> Shift in political orientation of youth (18-34) and older adults (65+) relative to the middle-aged (35-64) in the KGSS, controlling for socioeconomic status and region

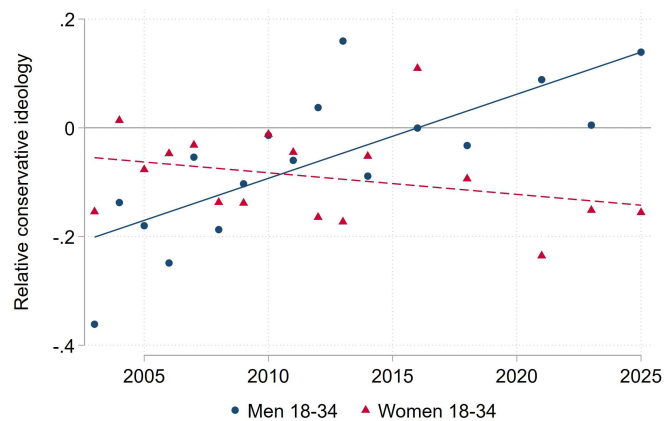

(A) Relative conservative-party support, 18-34

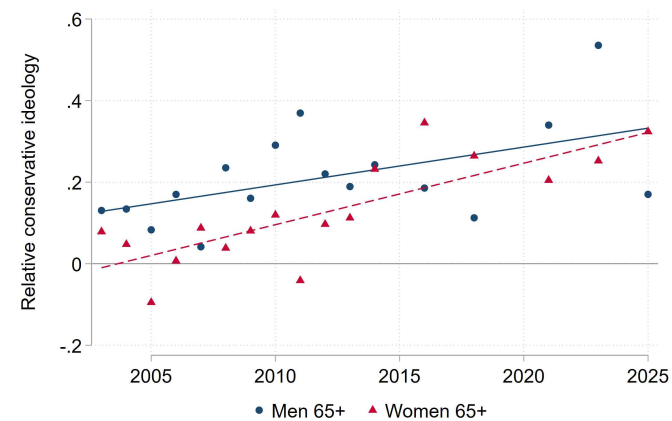

(B) Relative conservative-party support, 65+

(C) Relative conservative ideology, 18-34

(D) Relative conservative ideology, 65+

Source: KGSS. Note: Relative conservative-party support is each group's support rate relative to the 35-64 age group. Relative conservative ideology is the gap in the mean of a 5-point Likert scale. Estimated from the gap in residuals after running year-by-year OLS controlling for education, SES, and region.
